Stage 1 – Project Approval

My choice of website for the project will we a multi-page for the personal CV website. The pages I want to include are the following:

Home

The home page should be the first primary page and should include a biography with a short introduction to me and my contact information.

Education

The second primary page should contain three different content blocks with a timeline and a short text about each school I have attended (college, University of Copenhagen, and McGill). The content block should look like stacked cards.

For each block there should be a CTA to a secondary page with more information about each education part. Additionally, each page should contain a link to the projects page with an anchor to the project from the respective education part.

Experience

The third primary page should also contain two content blocks with a short text about each place I have worked at. They should be displayed as stacked text and media cards.

For each block there should be a CTA to a secondary page with more information about each job (Falck, DFDS).

Skills

For the fourth primary page, the skills I have obtained should be displayed. It should be a list with short descriptions (Languages, Coding, Design skills, IA, data analysis)

Projects portfolio

The fifth primary page should contain the bigger projects I have made in school, showcased like a stack of cards with links to secondary pages with more information. The cards should have sub-headers to show what education the project was made under (to make the anchor link).

Each secondary page should contain information about the project with key take-aways and a download link to the project PDF. Project examples include *HCC project*, *Design project*, and *Bachelors project*.
